3 Start with REACT

3.1 Basic setup (before REACT)

Create a new repository on GitHub. Clone it to a local folder. Create a simple HTML file.

```
<!DOCTYPE html>
<html>
<head>
<meta charset="UTF-8" />
<title>Indecision APP</title>
</head>
<body>
This is my HTML file!
</body>
</html>
```

Install yarn [CLI=> **npm i -g yarn**]

Install live server [CLI=> **sudo npm install -g live-server**]

Go to a folder ind-app/public [CLI=> **cd ind-app/public**]

Start a server [CLI=> **live-server**]

```
index.html - react-mead - Visual Studio Code
File Edit Selection View Go Run Terminal Help
EXPLORER ... index.html ...
OPEN EDITORS ind-app > public > index.html ...
REACT-MEAD ind-app / public ...
index.html ...
LICENSE README.md
TERMINAL ... 1:node ...
